July 3, 2013

Dear **Sudbury Street** Resident:

As part of its utility improvement program, the City of Marlborough recently opened bids for the installation of sanitary sewer and water main replacement on Sudbury Street. The work involves: the installation of new gravity sewers, a new sewer force main, sewer service connections from the sewer main in Sudbury Street to the edge of the city's layout/property line, replacement of the Sudbury Street water main, replacement of water services within the main replacement section, a new sewage pump station on Sudbury Street, rehabilitation of the existing Farrington Lane sewage pump station, temporary and permanent trench paving. A temporary by-pass water main will be installed during the project to maintain water service to all residents currently connected to the city's water system.

Each existing water service will have to be shut off inside the dwelling to make the crossover to the new watermain. This means that a representative from the City and the contractor must enter your dwelling to shut-off your existing water service (most likely at the meter in the basement). The City representative will have identification and a City vehicle, please make sure that this identification is displayed before allowing anyone into your home. The City's project engineer for this project will be James Dascoli. During the course of construction, please feel free to contact Mr. Dascoli or me with any questions that you may have. If you are experiencing an emergency, please call 911.

We anticipate that the construction will last approximately 15 months, tentatively starting work on or about the end of July 2013. Construction activities will typically take place between 7:00 A.M. and 3:30 P.M., Monday through Friday, though there may be times when the contractor has to work after 3:30 P.M. We will do our best to minimize disruption to the residences within the project limits. However, as is the case with most construction projects, there will be inconveniences. Traffic will be diverted (detoured) or limited to alternating one-way traffic. Where necessary, police details will be employed to ensure the safe passage of travel through the work area. Access to residents, emergency traffic, school buses, rubbish collection vehicles, and postal delivery vehicles will be maintained throughout the construction.

The contractor may, at times, need to assist in collecting solid waste and recycling. To ensure pick-up, we ask that you have your solid waste and recycling at curbside no later than 7:00 A.M. on your normal collection day (Friday).

We look forward to working with you on this project, and we thank you in advance for your cooperation. If you have any questions or if you need additional information, please feel free to contact my office at 508-624-6910 extension 7200 or project manager, Mark Dascoli, at extension 7206. For additional information regarding the Sudbury Street Area Water & Sewer Project, please visit www.marlborough-ma.gov/SudburySewer.

Sincerely,

Thomas E. Cullen, Jr., P.E.
City Engineer
