NOTICE OF UPCOMING HELICOPTER APPLICATIONS OVER SELECTED WETLANDS IN YOUR COMMUNITY

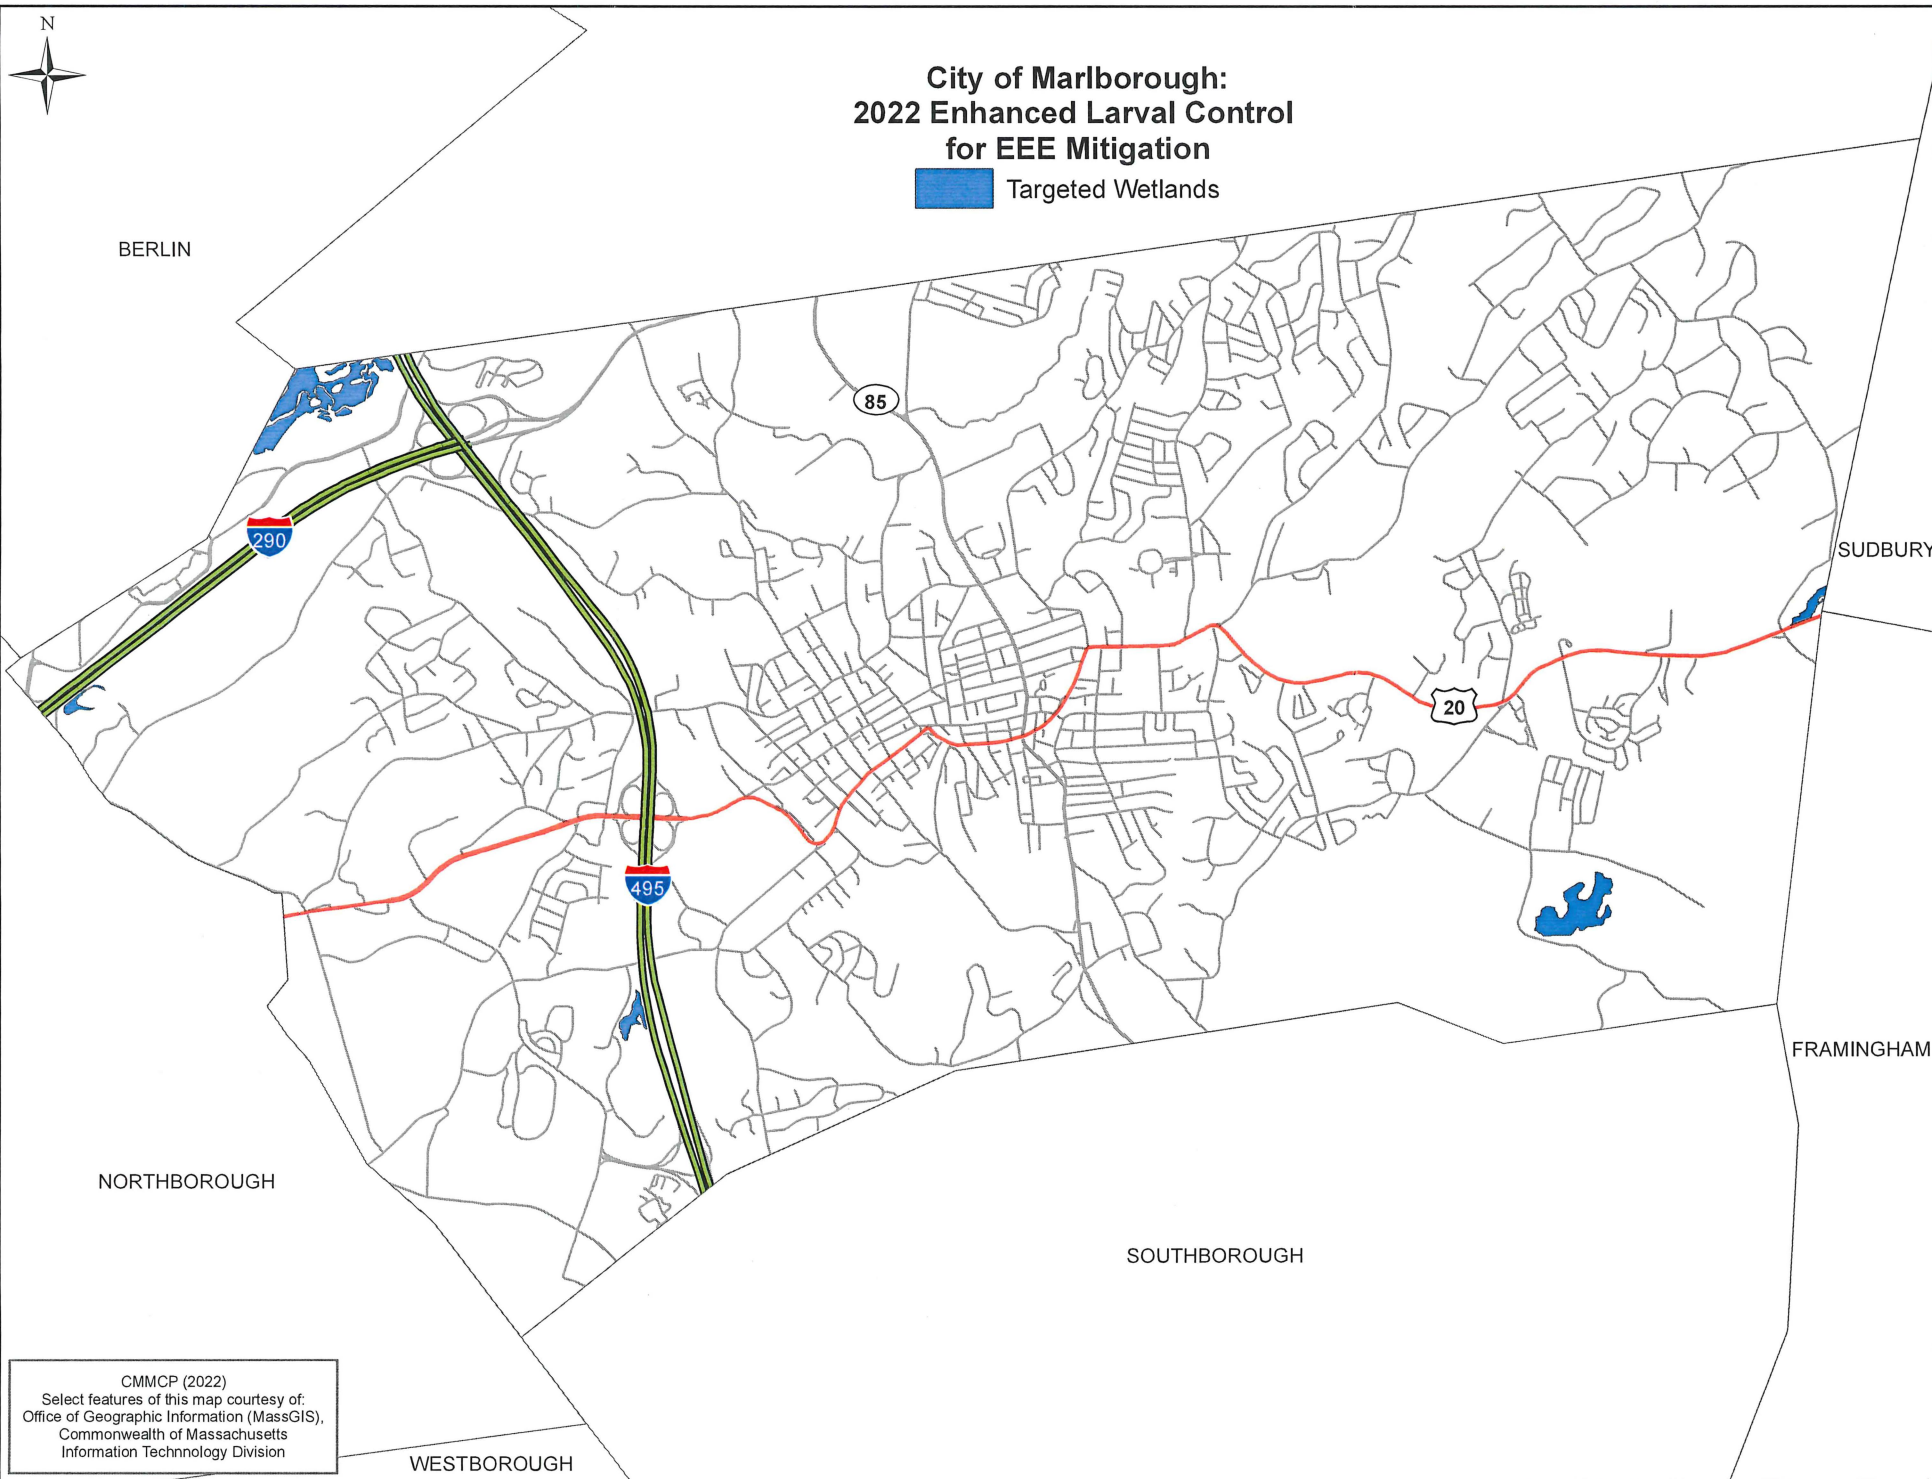

Please be advised that the Central Mass. Mosquito Control Project (CMMCP) and North Fork Helicopters will perform aerial applications for larval mosquito control from **May 23-28, 2022**. These applications will occur in low-lying swampy areas (see attached map) where mosquito larvae can develop using a granular form of a bacteria called spinosad (*Saccharopolyspora spinosa*), a certified organic, naturally occurring soil bacterium. This is the same program we performed in 2020 and 2021 to reduce risk from the EEE virus.

Weather, especially high winds and rain, will determine the actual dates of application(s).

Please call (508) 393-3055 for more information, and please pass our information along to any residents that call with any questions. For more information please check our website at www.cmmcp.org.
